## MOTE: Classification under "Status".

- (1) Experimental Type: Articles which are under development and have not progressed to the stage where engineering tests have indicated that the article has sufficiently satisfactory military characteristics to warrant service test preparatory to standardization.
- Service Test Type: Articles which have progressed beyond the experimental stage, which appear to have the desired military characteristics, which have operated satisfactorily in engineering tests and which have been approved for service test preparatory to standardisation.
- (3) Limited Procurement Type: Articles which have passed engineering and service tests favorably and appear to be suitable for service use but, before adoption as "Standard" articles, require refinement in design or further use in hands of troops to determine definitely their suitability.
